REPORT
OF THE
COMMISSIONER OF PATENTS
TO CONGRESS,
FOR THE YEAR ENDING DECEMBER 31, 1894.

Laid before the House of Representatives by the Speaker, February 20, 1895, referred to the Committee on Patents, and ordered to be printed.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,

Washington, D. C., January 31, 1895.

To the Senate and House of Representatives of the United States of America in Congress assembled:

I have the honor to submit the following report of the business of this Office for the year ending December 31, 1894.

In 1894 there were received 36,987 applications for patents; 1,357 applications for designs; 95 applications for reissues; 2,286 caveats; 2,053 applications for registration of trade-marks, and 371 applications for labels. There were 20,803 patents granted, including designs; 61 patents reissued, and 1,806 trade-marks registered. The number of patents which expired was 12,920. The number of patents which were by operation of law forfeited for non-payment of the final fee was 3,812. The total expenditures were \$1,100,047.12. The receipts over expenditures were \$97,392.46, and the total balance to the credit of the Patent Office in the Treasury of the United States amounts to \$4,369,135.91.

In proportion to population more patents were issued to citizens of Connecticut than to those of any other State—one to every 993 inhabitants—and next in order, in proportion to population, come Massachusetts with one to every 1,335; the District of Columbia with one to every 1,379; New Jersey with one to every 1,557; Montana with one to every 1,733; Rhode Island with one to every 1,753; New York with one to every 1,801, and Colorado with one to every 1,991. The States to whose citizens fewest patents were granted in proportion to the number of inhabitants are South Carolina, one to every 25,581; Mississippi, one to every 21,857; North Carolina, one to every 18,597; Arkansas, one to every 19,792, and Georgia, one to every 16,703. Some were issued to citizens of every State and territory in the Union.

As to foreign countries, more were granted to subjects of England than of any other—689; to those of Germany, 582; of the Dominion of Canada, 293; of France, 196; some to subjects of Austria-Hungary, Belgium, China, Cuba, Denmark, Finland, Hawaii, India, Ireland, Italy, Mexico, Netherlands, New South Wales, New Zealand, Norway, Queensland, Russia, Scotland, Servia, South Australia, Spain, Sweden, Switzerland, Venezuela, and Victoria, and one each to citizens, respectively, of British Guiana, Chile, Colombia, Ecuador, Guatemala, Natal, New Providence, Peru, and Porto Rico.

ACTIONS OF THE OFFICE.

The Office received for action not only the 40,492 original applications for patents, for designs, for reissues, and for the registration of trade-marks, but received also 85,422 amendments of applications and other writings from applicants which put the cases to which they appertained into condition for further action by the Office in the nature of re-examination.

An average of 711 original cases was received a week, and an average of 1,642 amended cases each week. On the 31st day of December, 1894, there were pending in the Office 2,273 new applications not acted on and 2,180 amended cases not acted on, a total of 4,453.

None of the thirty-three examining divisions in the Office was in arrears more than one month, either on new applications or on amended work, and this means that any application for a patent filed complete and in such form as that the subject-matter may be understood receives action upon the merits within one month of the filing date.

PROSECUTION OF CASES BY APPLICANTS.

On December 31, 1894, there were 5,597 allowed cases awaiting the payment of the final fee of twenty dollars, which section 4985 of the Revised Statutes permits to be paid within six months from the time at which the application was passed and allowed and notice thereof sent to the applicant or his agent. On the same day there were pending in the Office 50,507 cases which had been acted on by the Office, many of them repeatedly, and which were awaiting amendment or repeal or other proceeding in prosecution on the part of the applicants. Twelve thousand of these applications had been pending two years or more; 1,514 of them had been pending five years or more; 130 of them had been pending ten years, and 5 of them had been pending fifteen years.

Section 4894 of the Revised Statutes provides:

All applications for patents shall be completed and prepared for examination within two years after the filing of the application, and in default thereof or upon failure of the applicant to prosecute the same within two years after any action therein, of which notice shall have been given to the applicant, they shall be regarded as abandoned by the parties thereto, unless it be shown to the satisfaction of the Commissioner of Patents that such delay was unavoidable.

In some degree the practice obtains of employing this statute to sanction delays in the prosecution that seem to be unwarranted. An examination of three hundred of the oldest applications in the Office, all of them awaiting the action of the applicants, indicates that in some cases an application wanting in merit is

thus kept alive because the attorney shrinks from the responsibility of allowing it to become abandoned, and for that reason, just before the two years from the last Office action have expired, he amends for the purpose of continuing the application in being. In other cases, concerning inventions which are valuable, the delay is apparently intentional and the same procedure is employed to delay the issue of the patent in order that the seventeen years of exclusive use under it may begin from a future date and under a more fully developed art.

In a specimen case of apparently unwarranted delay the record of actions by the Office and of responses by the applicant was as follows:

Application filed.....	June 23, 1879
Rejected.....	July 21, 1879
Specification and claims amended.....	June 10, 1881
Rejected.....	June 22, 1881
One claim amended.....	May 2, 1883
Rejected finally.....	July 27, 1883
One claim canceled.....	July 24, 1885
Rejected.....	July 30, 1885
Three claims amended.....	July 22, 1887
Rejected.....	Jan. 6, 1888
All the claims amended.....	June 5, 1889
Rejected.....	July 2, 1889
Argument and amendment to two claims.....	June 23, 1891
Rejected.....	Aug. 26, 1891
Argument and amendment to one claim.....	Aug. 21, 1893
Rejected.....	Nov. 1, 1893

It appears from this record that the Office actions were prompt and that the applicant's responses were at intervals of nearly two years in six instances.

It is thought that the following regulations for the conduct of proceedings in the Patent Office are within the power of the Commissioner, with the approval of the Secretary of the Interior, to make, and it is proposed to enact them and to put them into effect on and after April 15, 1895:

An applicant will be considered to persist in his claim for a patent without altering his specification in case he fail to act in prosecution of the same for six months after the Office action thereon, and thereupon the Examiner will make a re-examination of the case.

In appealable cases in which no limit of appeal is fixed, no appeal will be entertained by any tribunal in the Office unless taken within six months from the action which puts the case in condition for appeal, unless it be shown to the satisfaction of the Commissioner that such delay was unavoidable.

In every case pending before the Office more than five years, in which the record raises the presumption that there have been intentional delays in prosecution, the Examiner may require the applicant to show cause why the case was not more rapidly prosecuted, and at the hearing, thereon, or upon failure of the applicant to appear, the Examiner will determine, under all the circumstances of the case, whether there have been intentional and unreasonable delays in prosecution, and upon finding the fact to be so he will reject the case for that reason.

I respectfully reiterate my former recommendation that the working force of the Patent Office be increased, and to that end that the appropriation be increased by \$64,590, in order that to such increased force may be assigned the work of classification, which now falls to the present examining corps. Perfect classification is the indispensable condition upon which reasonably accurate examinations upon the question of novelty may be made. The issue of a patent which is anticipated in any former patent, either in the 541,571 American patents or in the 864,700 foreign patents, or in any printed publication in this or in any foreign country, will be declared a nullity upon a proper proceeding in court. Very much of the litigation concerning patents is upon that question. The perfect classification of this vast material will enable applicants in the first instance to draw their claims with a close approximation to validity, and,

secondly, it would enable the Office to make searches upon which patents would be granted which in a very high percentage of cases would be held valid in the courts. A classification has been made by the separate divisions and from time to time revised; but it has its inherent defects, which require for their correction an exhaustive review of the whole ground.

Estimates are now before the Congress, and the additional force would comprise the following:

1 Chief of Classification Division.....	\$2,750
2 First Assistant Examiners, (each).....	1,800
2 Second Assistant Examiners, (each).....	1,600
3 Third Assistant Examiners, (each).....	1,400
36 Fourth Assistant Examiners, (each).....	1,200
2 Clerks, (each).....	1,200
2 Permanent Clerks, (each).....	1,000
2 Copyists, (each).....	900
2 Assistant Messengers, (each).....	720

It is thought that no new legislation would be required, seeing that the work to be done is such as has already been attempted, and that the changes in the appropriation bill for the present year providing for the increased force and increased expenditure are all that would be necessary to enable the work to be done. No printing is required.

I respectfully renew my former recommendations that the Scientific Library have an increased appropriation of \$10,000 instead of \$2,000; that the expired patents be printed; that authority for the sale of copies of patents, in classes, at five cents each, and in orders of one thousand or more, by classes, at three cents each, be given; that authority for organizing a patent bar be given the Commissioner, to be exercised under the approval of the Secretary of the Interior, and that section 4887 of the Revised Statutes be amended so that an application for a patent may be made in this country within six months from the date of application in any foreign country without subjecting the patent to restriction in its term of seventeen years by reason of such foreign application.

The following table shows the number of patents granted from the beginning down to the 31st of December, 1894, by classes, alphabetically arranged. Before each class is given the number of the division within the Office to which the class is assigned. In the second column is given the number of the class in the classification under which patents and the arts are arranged for the purposes of Office work. In the third column the names of the classes are given alphabetically, and in the fourth the whole number of patents granted in that class from the beginning down to the 31st day of December, 1894.
